(54) Title: METHOD, SYSTEM, PLAYBACK DEVICE AND RECORDER FOR DUPLICATING MULTI LAYER RECORD CARRIERS

(57) Abstract: When a multi layer record carrier comprising video information is to be duplicated on another multi layer record carrier the data spread over two recording layers on the source record carrier must also be spread over the two layers of the target record carrier. Once an appropriate layer transition for the target record carrier has been established the size of the first layer is adjusted by limiting the logical address space to exactly fit the video information obtained from the first layer of the source record carrier. Once the logical address space has been adjusted the layer transition will happen automatically at the correct point in the video information during the recording.
